DETAILED ACTION

Claim Objections

1. Claim 2 is objected to because of the following informalities: It appears --are—should be inserted at the end of the line 3, after “selectively”. Appropriate correction is required.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1, 2, 4, and 7 are rejected under 35 U.S.C. 102(b) as being anticipated by Yoshida (US Pat. 5,460,257).

See the attached marked up drawing figures 13 and 20 of Yoshida depicting the claimed features.

Claim Rejections - 35 USC § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Art Unit: 3651

5. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

6. Claims 3, 5, 6, 8, and 9 are rejected under 35 U.S.C. 103(a) as being unpatentable over Yoshida in view of Kempen (US Pat. 5,178,263).

Yoshida teach the claimed invention as outlined above except for each clip being welded to a bottom side of the elongated member. Instead Yoshida teaches bolting his clip 127 to an elongated member 126. Kempen teaches welding his clip 46 to an elongated member 50. It would have been obvious to one of ordinary skill in the art at the time the invention was made to use any number of well known connecting methods, including but not limited to bolts, screws, snap fit, tongue/groove and welds; since the examiner takes Official Notice of the equivalence of bolts and welds for their use in the mechanical connection art and the selection of any of these known equivalents would be well within the level of ordinary skill in the art.

RE the applicants U-shaped flanged bent clip, it would have been an obvious matter of design choice as to the shape of the clip, as Kempen teaches an L-shaped clip. The mere selection of a shape for a well known part does not provide a patentable departure from the device of Yoshida in view of Kempen. Furthermore, the parallel side bars of the conveyor

Art Unit: 3651

frame with upper and lower extending horizontal flanges are not positively recited as part of the claimed invention thereby rendering the shape of the clip as a design choice.

Conclusion

7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
